

Onasis Arrechavala Jr.

Swedesboro, NJ 08085

oarrechavala0@gmail.com | (702) 480-9686 | onasito.github.io/

EDUCATION

University of Nevada, Las Vegas
Bachelor of Science in Computer Science

August 2021 - May 2025

RELEVANT COURSEWORK

Data Structures/Algorithms – Applied data structures and algorithmic thinking to write efficient code

Database Management – Hands-on experience organizing, querying, and interpreting data to support data analysis

Machine Learning - Leveraged machine learning techniques to uncover patterns and predictive insights that improve data-driven decision making

TECHNICAL SKILLS

Languages: Proficient: C++, Python, TypeScript, JavaScript, Java, SQL, HTML, CSS, Assembly(x86, MIPS)

Frameworks/Runtimes: [Node.js](#), Express, React

Tools & Platforms: Git, AWS (Cloud Practitioner), GitHub Actions

PROJECT EXPERIENCE

Premier League Match Predictor - Full-Stack Web Application

- Built a full-stack match prediction platform using [Node.js/Express](#), React, Prisma and PostgreSQL
- Engineered an XGBoost multi-class classifier (upgraded from logistic regression) achieving ~55% cross-validated accuracy on home/draw/away outcomes outperforming a ~45-50% naive baseline
- Developed REST API integrations and dynamic frontend features to display live fixtures and probabilities

Credit Risk Prediction Dashboard - XGBoost + FastApi + React

- Built an XGBoost credit default-risk model on the Home Credit Default Risk dataset (Kaggle), engineering features across 6 relational tables
- Designed a leak-free preprocessing pipeline with train/validation split, fitting encoders and fill-values on training data
- Built a React + TypeScript (Vite) dashboard that consumes the FastAPI service to display default-risk predictions

IngrediScan (Backend Developer - Kotlin) – Software Product Design Course

- Developed an Android app to scan food items and retrieve ingredient information using CameraX API
- Designed and implemented REST API calls in Kotlin to retrieve and process ingredient and nutritional data
- Collaborated with peers to deliver a production-ready app, ensuring seamless communication between the backend services and Android frontend

WORK EXPERIENCE

Williams Sonoma - Technical Support

July 2024 - June 2025

Remote

- Worked within secure virtual desktop environments to access internal systems to troubleshoot customer and platform-related issues
- Used ticketing systems to document issues, track case progress, and escalate technical incidents
- Assisted Customers with order, payment, and account-related issues while delivering timely problem resolution in a high-volume support environment
